- 1 The chapter "Phonological Variation in Kurdish" by Erik Anonby examines the geographical distribution of phoneme inventories within Kurdish. In addition to confirming well-established phonological developments across Kurdish, it explores interdialectal variation. The relevant features are "Front Rounded Vowels," "labials [v] and [w]," "Affricates," "Uvular Consonants," "aspirated Stops," "Emphatic Alveolars (aka. Pharyngealized/Velarized)," "Pharyngeal Consonants." This study is based solely on data from the Manchester corpus. The features are presented in 21 tables.
