- 1 Haig examines Post-predicate elements across Kurdish. He describes these constructions as OVX, i.e., clauses show OV word order but a variety of elements typically occur post-verbally. These X elements include Goals, Recipients, Addressees, result states, and some light-verb complements. The article includes a detailed case study of the Northern Kurdish dialect of Duhok (Iraq). Additional contributions include synchronic theoretically grounded explanations for this phenomenon and an evaluation of diachronic theories for their development.
